DISCUSSION:

This site is a former lumber mills that occupied approximately 144 acres. The facility operated from 1891 until it was closed in 2008. The facility produced dimension lumber, bark, hardwood chips and sawdust. During the course of site operations, hazardous material/chemicals changed according to the time periods in which they were used, as did their hazardous waste management practices. Transformers and capacitors filled with PCB-containing oil were drained and serviced on-site.

Groundwater is not a concern since there are no drinking water wells located within 4 miles radius of the site. There are no schools, daycare centers or residences located within 200 feet of the site. There are no drinking water intakes located downstream of the site. The City's water intake is located upstream and outside the four miles radius. A release to the air pathway is not suspected since there are no activities being conducted at the site.

A decision of "No Further Remedial Action Planned" (NFRAP) under Superfund will be entered in CERCLIS, and the site will be referred to the State. A NFRAP designation means that no additional remedial steps under the Federal Superfund program will be taken at the site at this time unless new information warranting further consideration or conditions not previously known regarding the site are disclosed.

Based upon currently available information, this site fails to meet the minimum criteria required to be included, or proposed, at this time on the NPL by the EPA. The NPL is EPA's list of sites that are priorities for further investigation and, if necessary, response action under CERCLA, 42 USC 960001 et seq. Other actions maybe appropriate under State Authorities.
